

Assignment: Adding Azure Key Vault support to your microservices

In this assignment you enable the use of Azure Key Vault in your microservices.

Add Key Vault support

Follow these steps in the Catalog, Inventory and Trading microservices:

1. Update the version of the Play.Common package reference in the service project to the latest version you created in this module.
2. Use the new `ConfigureAzureKeyVault` method from Play.Common in Program.cs.
3. Build and publish a new version of the microservice docker image.
4. Commit and push all changes.
