

## Building a Docker image

Let's build our first docker image using the Docker file we created in the previous lesson.

### In Play.Identity repo

1. Add to README:

```
## Build the docker image
```powershell
$env:GH_OWNER="dotnetmicroservices"
$env:GH_PAT="[PAT HERE]"
docker build --secret id=GH_OWNER --secret id=GH_PAT -t play.identity:$version .
```
```

2. Set the env vars

3. Build the image

4. List the images:

```
docker images
```

5. Commit and push changes

In the next lesson you will run the just created docker image to verify it is working properly.
