

Creating a GitHub organization

Start

It's time to create the GitHub organization that will host all the source code we currently have in our box. You don't have to create an organization necessarily, but I find it very handy to group all the git repositories for your microservices and shared code.

1. Sign in to <https://github.com>
2. Click on **New organization**
3. Click on Create a free organization
4. Name: dotnetmicroservices.com
Email: julioc@dotnetmicroservices.com
Belongs to: My personal account
5. Complete wizard
6. Update the organization profile:

Display name: .NET Microservices
Email: julioc@dotnetmicroservices.com
URL: <https://dotnetmicroservices.com>
Profile picture: dotnet-bot_microservices.png
7. Go back to <https://github.com/dotnetmicroservices>

In the next lesson you will create your first GitHub repository.
