

Uploading files to a GitHub repository

Start

Let's now create the GitHub repository that will hold the source code for our Play.Common shared library.

1. Start at <https://github.com/dotnetmicroservices>
2. Click **Create a new repository**
3. Name: play.common
4. Description: Common libraries used by Play Economy services
5. Click **Create repository**
6. Add the remote repo:
`git remote add origin https://github.com/dotnetmicroservices/play.common.git`
7. Push:
`git push -u origin main`
8. Refresh GitHub repo page

Now that you have created your first GitHub repository, please continue to the next assignment, where you will create GitHub repositories for all the other directories you have created across this course.
