Adding Jaeger support to the microservice helm chart

Start
Let's now update our microservice helm chart to add support for sending traces to Jaeger in AKS.

In Infra repo
1. Add Jaeger values to helm\microservice\values.yaml:

envVariables:
  …
  SeqSettings__Port: 5341
  JaegerSettings__Host: jaeger-query.observability
  JaegerSettings__Port: 6831

2. Bump the version in Chart.yaml:

…
description: Installs a PlayEconomy microservice
version: 0.1.2

3. Bump the chart version in README.md:

helm push microservice-**0.1.2**.tgz oci://$appname.azurecr.io/helm

4. Package and push the new microservice chart (follow README steps)

5. Commit and push

In the next lesson you will update your microservices to send logs to Jaeger in AKS
