Sending logs to Seq in AKS

Start

Let's update our Trading microservice so that it can start sending logs to Seq in AKS.

In Trading repo

1. Update HELM_CHART_VERSION in .github\workflows\cicd.yml:

    build-and-deploy-service:
      …
      env:
        …
        HELM_CHART_VERSION: 0.1.1

2. Commit and push changes.

3. Wait for GitHub workflow to complete

4. Notice logs start showing up in Seq portal (cloud)

5. Perform a purchase in frontend portal

6. Notice the purchase logs show up in Seq portal

In the next assignment you will enable logging in all your other microservices.
